Become a Therapeutic Community Certified Trained Practitioner

Training starts October 2018

This is a brand new program- The course has been developed around the handbook of Democratic Therapeutic Community Theory and Practice (2017), it uses mixed styles of learning in a safe environment to ensure interactive participation at all levels. Expert staff deliver training and supervision.

What's innovative about it?

The course was developed by experienced therapeutic community practitioners and ex-service users to enable effective application of skills in the workplace. It is aimed at anyone who is working in a Therapeutic Community for adults, and/or offenders, as well as for those working in an environment where providing a therapeutic milieu is central to patient care.

tcept

The course runs over 3 residential weekends, which are 6 months apart, although for some trainees they may wish to extend this and complete it over 3 years. During the 6 months between each residential, students are expected to receive monthly supervision which is included in the cost of the course, and to complete self-directed study as set out in the curriculum. Students who are not working in a therapeutic community will need to arrange a 6 month placement in a TC, which will provide the experience to be supervised.
